

ELECTRONIC ARTWORK REQUIREMENTS FOR LABEL ART SUPPLIED ON DISC

Acceptable formats

Label art that is supplied on disc needs to be supplied in the following formats for correct output.

- Pdf is the preferred format.
- Please supply pdfs in CMYK, with all fonts embedded & distilled with "Press Settings", or in hi resolution. It is preferable if you flatten the pdfs for correct output.
- Spot colour pdfs (where the artwork contains just linework, or flat areas of colour), should be created with the spot colour channels selected. You should also clearly mark on the pdf the colours that it contains.
- Please remove all guidelines from the pdfs.
- You can also supply the art without a stacking ring as we can put one in for you. Just be aware of where the stacking ring will cut the artwork.

Artwork can be accepted in the following application software for output on Apple Macintosh. If you are unsure as to compatibility with your systems, please ask your customer service representative.

- Quark Xpress 7.5
- Photoshop CS3
- Illustrator CS3
- Indesign CS3
- Freehand MMX
- Please include all fonts & links. Art should be in hi res CMYK / spot colour.

Please supply a colour printout with your art so that we can check the job.

Note: Drawings Not To Scale
